# Stuller Bands.

*A Manufacturing Story*

When you buy a Stuller band, you are buying the highest quality available in our industry.

Our bands are made in Lafayette, Louisiana, at our global headquarters in our state-of-the-art manufacturing facility. To guarantee the quality of our bands, we begin band production by taking a bar of gold from our gold vault, melting it and making our own casting grain. Expert craftsmen control every aspect from metal fabrication to the finishing touches. They monitor each step along the way to assure your band is worthy of the lifetime commitment it represents.

## Continuous Cast Process

We set the casting machine to the appropriate size tube, insert a starter bar and add the casting grain.

After adjusting the temperature for the metal being cast, we press the tow button to begin casting.

When the pipe reaches the specified length, we cut and quench the newly casted pipe.

## Pipe Drawing Process

We use the ring size you ordered, the finished wall thickness and the outside diameter to determine the drawing dies sequence. We swage the end of the cast pipe to fit onto a steel draw rod. This requires great expertise. Once the inside diameter of the pipe is tightly wrapped around the draw rod, we “roll” it after each die draft so the pipe won’t stick to the draw rod. At the end of the draw sequence, the rod is pulled through a “pull off” die. The Draw Tech confirms that OD, ID, and wall thickness match your order. We cut off the pipe’s swaged tip and hand-engrave the pipe specifications and metal quality. It is now ready to be sent to the Machine Tool Operations department for the next production stage.

## CNC Lathe Machine Process

Our operator feeds the drawn pipe into the lathe machine set to cut the exact finger size, millimeter width and profile. The profile of the band determines the next step. Most bands go straight to the polishing department.

## Hand Finishing

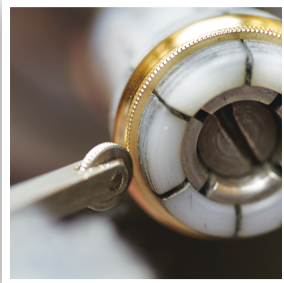

After tumbling the band, we hand finish it. That includes polishing the inside, karat stamping the band and then polishing the outside for that special shine your customers love. From tumbler to final polish, it takes just over four minutes per band. Now the band is ready to be shipped to you for next day delivery.

# Other Options and Processes Include:

## Milgrain

We place the band on a lathe and the operator hand applies the milgrain tool to give your ring the desired look.

## Channel Process

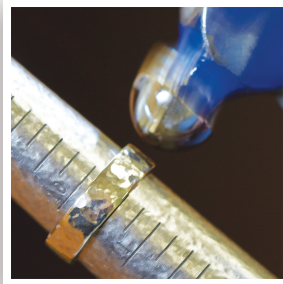

Channels and holes for channel set bands are machined, on a CNC Lathe, one ring at a time to ensure you the best quality without extra metal loss.

## Engraving and Color Fill

If your customer wants engraving, the band goes to our laser engraver. It is engraved with the message and in the font or handwriting your customer wants. If requested, we send it to our enamel area for color fill in one of six colors.

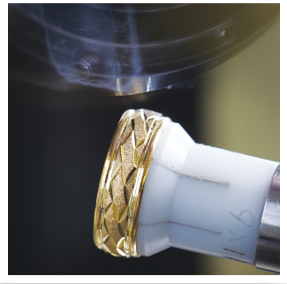

*Ice*

*Hammered*

*Stone*

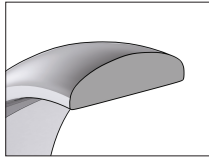

*Posalux*

## Special Finishes

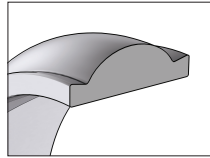

All of our special finishes and cut patterns are applied individually and by hand.

Special finishes include Bead Blast, Florentine, Glass Blast, Hammer, Ice, Satin and Stone.

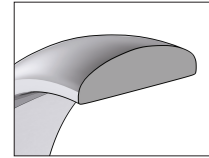

Cut patterns require a Posalux machine. We use the appropriate diamond tip tool to cut the design or pattern your customer chose. With more than 30 tips each creating a specific look, your customer has many options and designs to choose from. See pages 40-41 for all special finish options.

True hand engraving, once a cornerstone of fine jewelry ornamentation, is all but a lost art today. Skilled artisans tutored in classic old-world apprenticeship programs labor over each and every ring, in effect creating one-of-a-kind masterpieces. Single tone bands can be stretched up to  $\frac{3}{4}$  of a finger size with proper annealing (with the exception of series #50065). Half sizes can be special ordered and are non-returnable.

## Gold With a Silver Lining

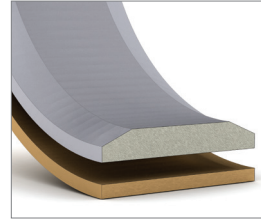

Each Precious Bond band is made of 100% precious metal. The outer seamless band of 10kt gold is approximately 25% of the total weight. Using high performance technology, this 10kt band is designed, finished, and uniquely fused to a sterling silver liner.

Then each precision crafted band is finished with palladium and a rhodium bond, to keep the finish intact with color and brilliance.

## Sizing Precious Bond Bands

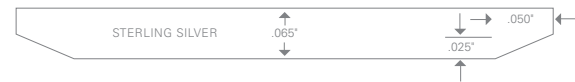

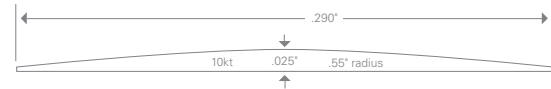

Your band is made of seamless, extruded gold and silver tubing, fused together without the application of any solder points. We highly recommend that your professional jeweler use a ¼ size stretching rule to avoid any “orange peeling.”

The band may NOT be cut and sized down.

Black titanium is created by combining titanium and zirconium at a high temperature in a vacuum.

Because the black is not a coating or plating, it will not wear away over time. Titanium bands also have the benefit of being hypoallergenic.

## Understanding Metals

Metal	Grain Color	Color Description	Finish	Characteristics	Hypo Allergenic
<b>Platinum (Pt):</b> A dense, malleable metal. It is almost always used in its purest form in jewelry, 95%. Platinum is substantial in weight and non-corrosive. Comparatively, a ring in platinum will weigh almost 60% more than the same ring in 14kt gold.

## How To Size A Ring

Make sure you have the right tools to get their accurate finger size.

Base the band size on the point where the leading edge of a band touches a mandrel.

Whether your customer is trying on an alloy sample or you are sizing their ring on a mandrel, this will ensure that you have consistent and accurate sizing.

Always keep in mind that a larger width ring may need to be purchased in a larger finger size to accommodate displacement.

**35-1094** The True-Size Ring Sizing System  
This sizing system features 47 precise comfort fit 6mm bands. It includes sizes 1 to 16 in half sizes and sizes 4 to 12 in quarter sizes. Rings are laser etched with size. The wood presentation box has a sizing conversion chart.
