**Gold With a Silver Lining**

Precious Bond bands are made of 100% precious metal. The outer seamless band of 10kt gold is approximately 25% of the total weight. It is designed, finished, and uniquely fused to a sterling silver liner through high performance technology. The crafted piece is finished off with palladium and then a rhodium bond, keeping the finish intact with color and brilliance.

**Caring for Your Precious Bond Band**

Taking care of your Precious Bond band is the same as any other gold band. Because the outer surface of your band is a precious metal, it can be scratched. A jeweler can carefully polish the blemishes out and restore your band to its original state.

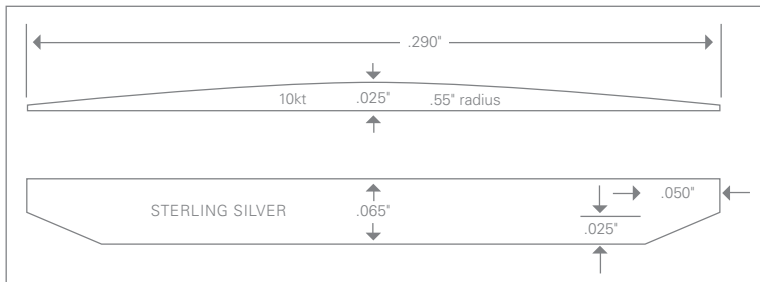

**Sizing Precious Bond Bands**

Your band is made of seamless, extruded gold and silver tubing, fused together without the application of any solder points. We highly recommend your professional jeweler use a one size stretching rule to avoid any "orange peeling." The band may NOT be cut and sized down.

## HAND ENGRAVED WEDDING BANDS

True hand engraving, once a cornerstone of fine jewelry ornamentation, is all but a lost art today. Skilled artisans tutored in classic old-world apprenticeship programs labor over each and every ring, in effect creating one-of-a-kind masterpieces. Single tone bands can be stretched up to  $\frac{3}{4}$  of a finger size with proper annealing, with the exception of series #50065. Half sizes can be special ordered and are non-returnable. ### TECHNICAL TIP: Polishing Cobalt

Although Cobalt can scratch, a jeweler can take those scratches out using these steps below.

#### **Step 1**

To remove scratches and bring finish to a pre-polish, use a felt wheel (#17-1207) with Gray Star compound (#47-3297).

Clean ring thoroughly to remove all pre-polish residue.

#### **Step 2**

To bring surface to a high mirror luster, use string buff (#17-1108) and Picasso Blue polish (#47-3246).

Clean the ring thoroughly again and it is ready to be presented to your customer.
